Faraz

Ready to start in 4 weeks

Pakistan | 4 hrs overlap (PST or EST) | 2 yrs exp

As a Senior Flutter developer with three years of experience, I excel in crafting user-centric mobile applications. My career is mix of self directed, remote and project-based work. I've successfully managed projects independently and led developer teams. I take pride in my ability to create applications that serve hundreds of daily users, consistently delivering enhancements and optimizations. My proficiency in remote work is underscored by strong self-discipline, effective communication, and a track record of meeting project deadlines. I'm committed to providing innovative solutions to complex software development challenges.

☑ Technical Skills

You will be matched for these following skills:

Skill	Years of experience
Firebase 2 years	2 years
Flutter 3 years	3 years

Additional skills:

Security | 2 years   REST/RESTful APIs | 2 years   Cloud | 2 years

Video | 2 years   Project Management | 2 years

Software Development | 2 years   Mobile App Development | 3 years

Communication | 2 years

March 2022 - September 2023
1 yrs 6 mos

TLP Powershow
https://play.google.com/store/apps/details?id=com.faraz.khr&pcampaignid=web_share

TLP Powershow (Social Media Application)
Currently live on the Play Store with a peak of 950 daily organic users, with 4.8 star user rating on Google Play Store,out of 165 reviews, 163 users gave 5 stars to this platform.
In my role as a developer, I've had the privilege of spearheading a comprehensive project involving Flutter and Firebase, coupled with seamless APIs integration to an external cloud storage provider for efficient image and video storage. This endeavor culminated in the successful launch of the TLP Powershow application.

The project boasted robust security features, incorporating encrypted messaging and data storage to ensure the utmost privacy and confidentiality for users. To fortify the system, Firebase rules were meticulously defined, and code obfuscation techniques were applied, elevating the overall security standards.

Technologically, I have showcased proficiency in Flutter, Firebase, and API integration. These skills enabled me to create a user-friendly, secure, and responsive application while maintaining an efficient data storage solution. For state management I used Provider state management. The amalgamation of these technologies allowed us to deliver a robust product that met user needs and expectations, setting new industry standards for security and functionality.
TLP Powershow offers a range of features, including a Follow-Following system , text and picture posts, a Video Reels section with like, comment and download element. A user-friendly online store for shopping. Also, I implemented a seamless messaging feature for user-to-user communication and a search function to facilitate friend discovery. To keep users engaged, I developed a customized notifications system. My experiences with TLP Powershow have equipped me with valuable technical and strategic skills for software development and project management roles. This is still live and growing.

School LMS

School LMS (Learning Management System)
Currently live in 5 institutions.
(Android+ Ios+ Web) with admin panel
School Learning Management System (LMS) is a comprehensive platform that revolutionizes the educational experience. This is also built in Flutter while using Firebase firestore, Firebase storage, Live notification and many more. Designed to serve multiple schools, it offers a student Portal where parents can effortlessly monitor attendance, daily test scores, exam grades, fee history, and important announcements. With integrated communication tools, parents can easily engage with teachers. The system includes an extensive e-learning library experience. Accessible through both mobile and web interfaces, and with notes, videos, books, and online test support, ensuring a rich learning complemented by a robust Admin Panel, our LMS empowers schools to deliver seamless education and manage their institution with all the needed tools.
This is currently used in 5 institutes.

Firebase   Flutter   Communication

Trochop

An Online Food Delivery App made entirely on REST APIs.This was also built in Flutter. Web Version was already built and Front-end was also already built , I developed mobile back-end version of it with using provider for It.
As the project was completed, I handed over it to my Project Manager, do not know any additional details to be honest.

REST/RESTful APIs   Flutter   Mobile App Developm...

Junior Flutter Mobile Developer
QuadActs Mobile Tech. ltd

March 2021 - August 2021
5 mos

Textly

TextFly
School Management Project
Enables users to create contact groups from their phonebook and easily select pre-designed message templates for sending coded messages. This tool is tailored for school management, allowing them to efficiently communicate with student's parents regarding attendance, marks, and other important updates. relevant information reaches the right recipient.
This project did not work well because it was using SMS service of a normal SIM, so the Sim provider blocked due to large sending of SMS to different people.
